"BLOEMGAARD"

It is like a picturesque stage setting, this cottage of plaster with thatched roof and pergola, inviting to a cup of tea. The oaken half door with the "peep-hole" leads to a room so quaintly Dutch that visitors are delighted. Of course the floor is of wide red brick and the fire place built high into the chimney. There are pieces of genuine Delft here and there and built into a snug corner of the wall a two story bed. One may have tea in the niche by the window, by a cozy fire or be served out of doors under the trees, but whichever place is chosen the atmosphere is one of real charm. In June tulips, daffodils, peonies and iris fill the borders with exquisite colors, while early autumn is made beautiful by thousands of gladioli planted in sweeping curves around the sunny waters of the pond. Not only is "Bloemgaard" unusual but it affords visitors an opportunity of deciding upon desirable effects for their own estates and selecting choice varieties of bulbs for importations.

VISITORS WELCOME

"Bloemgaard" is located on the grounds of the Breck Robinson Nurseries, Lexington (Munroe Station) Mass. It may be reached by motor over the old historic route of Paul Revere, via Massachusetts Avenue, from Boston through Cambridge. By train from the North Station. By any electric car connecting at Harvard Square. Telephone Lexington 2660.

DECIDUOUS TREES

Our Shade and Lawn Trees are well grown, transplanted specimens, dug with strong fibrous roots and should not be compared with untransplanted stock offered at lower prices.

We can usually supply larger sizes than those here quoted, for which special prices will be given on request.

THE MAPLES

The Maples supply us with some of the most useful street and shade trees available for general planting. They are comparatively rapid in growth, symmetrical, and free from the ravages of many of the most destructive insect pests.

6 to 8 ft.	1.50		

THE MAGNOLIAS

Probably the best known of our flowering trees, blossoming in early spring, and thoroughly hardy in this locality.

<i>Magnolia acuminata</i> (Cucumber Tree)			
6 to 8 ft.	2.00	20.00	
<i>Soulangiana</i> (Pink and White)			
3 to 4 ft.	3.50	35.00	
4 to 5 ft.	5.00		
<i>stellata</i> (Dwarf White)			
2½ to 3 ft.	5.00		
3 to 3½ ft.	6.00		
<i>tripetala</i> (Umbrella Tree)			
6 to 8 ft.	2.00		

THE FLOWERING APPLES

Nothing is more striking than a Flowering Crab Apple in full bloom. Not the least of its attractiveness, however, lies in the red or yellow fruit which loads the branches in the autumn.

<i>Malus</i> (Flowering Apple)			
<i>Angustifolia</i> (Bechtel's Dbl. flg. Crab)			
2 to 3 ft.	1.00		
3 to 4 ft.	1.50		
4 to 5 ft.	2.00		
<i>floribunda atrosanguinea</i> (Single Carmine)			
4 to 5 ft.	1.50		
5 to 6 ft.	2.00		
<i>Neidzwetzkyana</i> (Deep pink; purplish foliage)			
4 to 5 ft.	2.00		
<i>Parkmanii</i> (Halliana) Double pink.			
3 to 4 ft.	1.50		
4 to 5 ft.	1.75		

<i>Morus Tartarica</i> (Russian Mulberry)			
5 to 6 ft.	1.00	10.00	
var. <i>pendula</i> (Tea's Weeping Mulberry)			
2 year heads	2.50	25.00	
3 year heads	3.50	35.00	
<i>Platanus</i> (Plane Tree)			
<i>Acerifolia</i> (Orientalis)			
8 to 10 ft.	1.50	15.00	
10 to 12 ft.	2.00	20.00	

THE POPLARS

The Poplars supply us with rapid growing trees in forms suitable for street, shade and screening purposes. Probably the best known variety is the Lombardy Poplar used so much for screening unsightly objects. For this purpose it should be set from 4 to 8 feet apart according to the density of screen required.

<i>Populus alba</i> (White or Silver-leaved Poplar)			
var. <i>Bolleana</i> (Upright Silver-leaved Poplar)			
8 to 10 ft.	\$1.50	\$15.00	
10 to 12 ft.	2.00	20.00	
12 to 15 ft.	3.00		
15 to 18 ft. (extra heavy)	5.00		
var. <i>canescens</i> (Spreading Silver-leaved Poplar)			
10 to 12 ft.	2.00		
12 to 14 ft.	2.50		
<i>balsamifera</i> (Balsam Poplar or Balm of Gilead)			
8 to 10 ft.	1.50		
<i>deltoides</i> var. <i>monilifera</i> (Carolina Poplar or Cottonwood)			
8 to 10 ft.	1.00	10.00	50.00
10 to 12 ft. 1¼ to 1½ in.	1.50	15.00	75.00
12 to 15 ft. 1½ to 1¾ in.	2.00	20.00	
15 to 18 ft. 1¾ to 2 in.	3.00	30.00	
<i>nigra fastigiata</i> (Lombardy Poplar)			
6 to 8 ft.75	7.50	50.00
8 to 10 ft.	1.00	10.00	75.00

15 to 18 ft. 1¾ to 2 in.	3.00	30.00	150.00
<i>Prunus Pissardi</i> (Purple-leaved Plum)			
3 to 4 ft.	1.00	10.00	
4 to 5 ft.	1.25	12.00	
5 to 6 ft.	1.50	15.00	
<i>Pyrus malus</i> (Flowering Apple). See <i>Malus</i>			
<i>Pyrus Sorbus</i> (Mountain Ash). See <i>Sorbus</i>			
<i>Ptelea trifoliata</i> (Hop Tree)			
4 to 5 ft.75	7.50	
var. <i>aurea</i> (Golden-leaved Hop Tree)			
3 to 4 ft.75	7.50	

THE OAKS

Long lived trees, free from insect and fungus pests; suitable for shade or street planting. The Pin Oak is one of the best permanent street trees, yet grows almost as rapidly as a Maple.

	Each	Per Doz.	Per 100
<i>Quercus alba</i> (White Oak) 5 to 6 ft.	2.00		
6 to 8 ft.	3.00		
<i>coccinea</i> (Scarlet Oak) 6 to 8 ft.	2.00	20.00	
8 to 10 ft.	2.50	25.00	
<i>palustris</i> (Pin Oak) 6 to 8 ft.	2.00	20.00	150.00
8 to 10 ft.	2.50	25.00	
10 to 12 ft.	3.00	30.00	
<i>rubra</i> (Red Oak) 6 to 8 ft.	2.00	20.00	150.00
8 to 10 ft.	2.50	25.00	

THE WILLOWS

The Willows prefer a damp situation, but are often found growing luxuriantly in comparatively dry soil. They make graceful trees when allowed to develop, but are much used for screening purposes where they stand severe pruning without injury. The Laurel Leaved Willow (*S. pentandra*) is the most valuable plant for coarse hedge purposes.

<i>Salix alba</i> (Common White Willow) 4 to 5 ft. .	.50	5.00	
6 to 8 ft.75	7.50	
<i>Elegantissima</i> (Thurlo's Willow)

<i>Europaea</i> (European Linden)			
8 to 10 ft.	1.75	17.50	
10 to 12 ft.	2.50	25.00	

THE ELMS

Here in New England many towns owe much of their beauty to the stately elms which border their streets. The American Elm is, of course, the best known, but the English Elm (*U. Campestris*) is being much used for street planting. Its foliage is somewhat smaller than that of our native variety and its habit of growth more spreading.

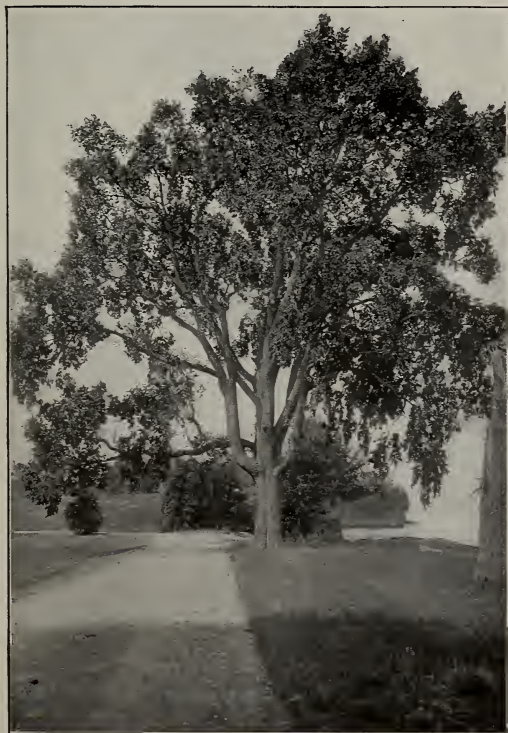

<i>Ulmus Americana</i> (American White Elm)			
8 to 10 ft.	1.50	15.00	100.00
10 to 12 ft.	2.50	25.00	175.00

FLOWERING SHRUBS

When right selections are made, shrubs serve almost as well as evergreens to screen fences and other low, unsightly objects. Even in Winter they are attractive from the gracefulness and color of their stems and branches.

The following list comprises sorts which have been found of value in this climate. Most varieties may be planted with equal success in either Spring or Fall. In general, for massed effects, the dwarf and small-growing shrubs should be set 2½ feet apart; medium and large-growing, 3 to 5 feet apart.

Shrubs for Shady Places: Berberis, Ceanothus, Clethra, Cornus, Euonymus, Hamamelis, Ilex, Ligustrum, Lonicera, Rhodora, Ribes, Symphoricarpos, Viburnum, all Evergreen Shrubs.

Shrubs bearing bright-colored berries: Amelanchier (Red), Berberis (Red), Cornus (White), Eleagnus (Red), Euonymus (Red), Ilex (Red), Ligustrum (Black), Lonicera (Red or Yellow), Lycium (Red), Pyrus (Red or Black), Rhamnus (Black), Rhodotyus (Black), Rosa (Red), Sambucus (Red or Black), Symphoricarpos (White or Red), Viburnum (Black or Red).

	Each	Per Doz.	Per 100
Amelanchier botryapium (Dwf. Juneberry)			
3 to 4 ft.	\$0.50	\$ 5.00	
4 to 5 ft.75	7.50

floribunda var. nigra (Black Chokeberry)			
2 to 3 ft.50	5.00	25.00
3 to 4 ft.60	6.00	

THE AZALEAS

The Azalea holds a prominent place among the early spring flowering shrubs. While the European varieties have larger flowers, many of our hardy native sorts are fully as attractive. They prefer rich, fibrous soil protected from the sweep of cold winds in winter, and from full exposure to the sun in summer.

THE FORSYTHIAS

The Forsythias are the earliest of our spring flowering shrubs, blooming in April before the leaves appear. They reach a height of 6 to 8 feet; some are upright and stiff in habit of growth, while others, F. suspensa in particular, are drooping and graceful.

THE HYDRANGEAS

The hardy Hydrangeas are old favorites, and should be included in every shrub collection. They bloom late in the season. The heads of flowers remain until after cold weather sets in. They do well in dry soil; severe pruning is necessary if profusion of bloom is sought.

THE SYRINGAS

These old-fashioned shrubs cannot be surpassed for wealth and fragrance of bloom. Varieties may be selected which will grow tall, or which will not exceed a height of 4 to 5 feet. The Golden Syringa is the brightest and best known of our yellow leaved shrubs.

THE SPIREAS

One of the most valuable classes of hardy shrubs. The best known is, of course, S. Van Houttei, which has superseded the old-fashioned Bridal Wreath in popular favor. S. Arguta is the earliest to bloom, followed by the feathery leaved S. Thunbergii. The dwarf growing S. Anthony Waterer blooms during the summer. S. opulifolia aurea is a tall rapid growing form with yellow foliage.

THE LILACS

Unless intended for a hedge, the Lilacs should be planted far enough apart so that they can develop naturally, under which conditions, they will bloom profusely from top to bottom. Especial attention should be called to the less common varieties, *S. Josikaea* and *S. Persica*. The former is late blooming, its foliage being plicated and leathery, not subject to dust and mildew as is the case with the Common Lilac. The Persian Lilac is a slender-growing shrub with a tendency to droop, especially when in bloom. Amongst the named hybrids many striking colors will be found.

THE SNOWBALLS

These hardy native shrubs supply us with some of our best planting material. They will grow in partial shade, and will stand exposure to cold winds. The best known are perhaps the Japanese Snowball (*V. plicatum*) and the Bush Cranberry (*V. opulus*), the latter bearing heavy clusters of bright red berries, somewhat resembling those of the Mountain Ash.

HEDGES AND SCREENS

A wide range of choice in hedging materials is possible, and selections should be made with a view to the ultimate height and density desired. For low hedges, which are to be closely sheared, Barberry and Privet are the usual choice, spacing the plants one foot apart. For taller hedges and screens, the Willows, Lilacs, and evergreens of various sorts are frequently used, spacing them three to four feet apart. Many of the flowering shrubs also form most attractive hedges and borders. For a screen of extreme height and rapid growth, the Lombardy Poplar is of course to be recommended. (See page 2.)

Not less than 25 of one variety at the 100-rate; for smaller quantities see "Deciduous Shrubs" in foregoing pages.

EVERGREENS

NOTHING approaches in richness a properly arranged mass-planting of hardy evergreens. Many striking combinations of color, height, and varied foliage are possible; best of all, they are as effective in winter as in summer.

We carry many other varieties that are worthy of use in this locality; but the following are what we would recommend as most reliable for general planting.

THE FIRS

<i>Abies balsamea</i> . The "Fir Balsam" of the woods. Tall, slender growth, with dark, shining foliage, silvery underneath. Will thrive in cold, wet ground as well as in higher situations.	Each	Per Doz.	Per 100
3 to 4 ft.	\$1.75	\$17.50	
4 to 5 ft.	2.50	25.00	
<i>A. concolor</i> (Silver Fir). A rival of the Blue Spruce in attractiveness, this fir is worthy of a place in any well-kept grounds. Grows tall and broad; its foliage is glaucous green, the blue tint becoming especially pronounced in the new growth of early summer.			
2 to 3 ft.	3.00		
3 to 4 ft.	5.00		
4 to 5 ft.	7.50		
5 to 6 ft.	9.00		
6 to 7 ft.	12.00		
<i>A. Fraseri</i> (The Double Balsam). Those who have seen this fir growing in the mountains of North Carolina will agree that it is the finest of the dark green evergreens. Very hardy in New England.			
2 to 3 ft.	1.50	15.00	
3 to 4 ft.	2.50	25.00	
4 to 5 ft.	4.00	40.00	

THE CEDARS

<i>Juniperus Chinensis</i> (Chinese Juniper). One of the most desirable of the genus; should be kept closely pruned, when its silvery young growth becomes luxuriant and leafy.			
2 to 3 ft.	2.50	25.00	
3 to 4 ft.	3.50	35.00	
<i>J., var. albo-variegata</i> . Bluish green foliage, very dense, interspersed with silvery white. One of the best of Junipers in growth and appearance. A charming dwarf plant.			
18 to 24 in.	2.50		
2 to 3 ft.	4.00		
3 to 4 ft.	6.00		
<i>J., var. Pfitzeriana</i> . A beautiful new evergreen of graceful habit, resembling in form the well-known <i>J. Japonica aurea</i> , though in color the foliage is of a pleasing glaucous green.			
18 to 24 in.	2.50	25.00	
2 to 3 ft.	4.00	40.00	
<i>J., var. pyramidalis</i> . Narrow, pyramidal form, with bluish green, mostly needle-shaped foliage.			
4 to 5 ft.	5.00		

<i>J. communis</i> (Common Juniper)	Each	Per Doz.	Per 100
<i>var. depressa</i> (Canadensis). The low-growing, grayish-green juniper found usually in our rocky New England pastures, but nevertheless a beautiful dwarf evergreen for ornamental planting, and one of the most hardy.

<i>J., var. aurea</i> (Canadensis aurea). Like the former, but tips and branchlets golden-yellow.			
12 to 15 in.75	7.50	
15 to 18 in.	1.00	10.00	
18 to 24 in.	1.50	15.00	
<i>J., var. Hibernica</i> (Irish Juniper). Of dense, pillar-like growth. Glaucous green foliage.			
18 to 24 in.	1.50	15.00	90.00
2 to 3 ft.	2.00	20.00	
3 to 4 ft.	3.00	30.00	
<i>J., var. Suecica compacta</i> . Swedish. Grows much as the Irish does, but of more bushy form.			
18 to 24 in.	1.25	12.50	
2 to 3 ft.	2.00	20.00	
<i>J. excelsa var. stricta</i> . Of compact, conical habit, with steel-blue, pointed leaves which stand erect. One of the best junipers where a formal effect is desired.			
12 to 15 in.	\$1.50	\$15.00	
15 to 18 in.	1.75	17.50	
18 to 24 in.	2.00	20.00	
<i>J. Japonica</i> (Japanese Juniper). Dense, low, bright green, with spreading, sometimes procumbent branches. Very hardy.			
18 to 24 in.	2.00	20.00	
<i>J. Japonica aurea</i> (Golden Japan Juniper). A splendid dwarf golden form. Always bright, and a feature in any planting.			
2 to 3 ft.	2.50	25.00	
3 to 4 ft.	4.00	40.00	
4 to 5 ft.	6.00	60.00	
<i>J. Sabina</i> (Savin Juniper). Procumbent in habit, usually somewhat fan-shaped; dark green. This is a much-used variety, and is always distinctive.

RHODODENDRONS

England and Holland have for many years been our source of supply for Hybrid Rhododendrons. The recent ruling of the Federal Horticultural Board, prohibiting the importation of trees and plants from foreign countries has therefore limited the stock that can be offered this season. We can, however, supply the leading hardy varieties as follows:—

NAMED HYBRIDS

NATIVE RHODODENDRONS

We strongly recommend the use of our native Rhododendrons. They are hardy, free flowering, and will survive our rigorous New England winters with much less loss than hybrid sorts heretofore so largely imported. Our source of supply is such that we can fill orders for any quantity of any size in bushy, well furnished plants. Favorable quotations can be made on carload lots delivered to any point in New England.

Rhododendron Carolinianum . A native of the high altitudes of the Southern Appalachian region, and one of the finest of all broad-leaved evergreens. Of compact habit, growing from three to five feet tall, and about the same in diameter; foliage glossy, dark green, flowers pale rose to deep pink in great profusion.

Rhododendron Catawbiense . This is also a native of the Allegheny Mountains, and is extremely hardy in New England. The plant forms a compact well-shaped clump, growing from four to six feet in height. The rich green foliage and large trusses of pink to bright red flowers, makes it one of the most desirable broad-leaved evergreens.

ROSES OUT-OF-DOORS

ROSE-GROWING is becoming more and more popular with flower-lovers, especially since the introduction of the wealth of new varieties which have been developed during the last decade, suitable for out-of-door culture in our rigorous climate. The best of the new, together with many of the old favorites are included in the carefully revised lists to be found in the following pages. The varieties are grouped according to the uses for which they are best fitted. Every sunny corner of the home grounds may well be occupied by some type of rose; it will surely respond liberally to even ordinary attention.

Most varieties can be supplied either dormant or in pots, the latter being intended for late spring and mid-summer planting.

CULTURAL NOTES

Roses grown primarily for perfection of bloom, as is usually the case, require a warm and sunny, yet well ventilated situation, with rich soil and plenty of water at regular intervals. Proximity to overhanging trees or buildings should be avoided, as well as exposure to sweeping winds. The soil is best prepared to a depth of two feet or more, placing a layer of stones and gravel at the bottom of such an excavation for drainage, then filling in successively with sods and well-rotted manure, finishing to the level of the ground with rich, friable loam. Roses are gross feeders, but preparation as outlined will make for vigorous growth for several seasons.

Dormant roses should be planted early in the spring, although a few of the hardier sorts will bear fall planting. After May first, only pot-grown plants can be relied upon for thrifty growth; they have an active root-system established, and may be set out in the open ground at any time during the summer. Many of the best roses are "budded,"—that is, the flowering wood is grafted or budded to a wild root-stock, and this bud or graft, which is readily distinguished, should always be set a couple of inches below the surface of the ground. If given an opportunity, the wild root will send up a coarse, prickly "sucker" which will eventually sap the strength of the less robust flowering wood. Two to three feet apart is the proper spacing when planting a rose-bed, the distance depending upon the size of the plants, and the habit of growth of the variety in hand.

Thorough cultivation of the rose-bed is advisable, the purpose of this being not only to prevent the growth of weeds, but to conserve the moisture about the roots of the plants. Plenty of water should be applied during dry periods.

Of the injurious insects which attack the roses the green fly or aphid, appearing early in the season, is the most persistent. A "contact" spray, which kills by caustic action, is necessary, and we recommend Nico-Fume Liquid in a soap solution for this purpose. Various other preparations of like nature are obtainable. Insects which eat the leaves, such as caterpillars, worms, and slugs, require a poisonous spray for their extermination; Hellebore or Arsenate of Lead are effective, though the latter discolors the foliage to some extent.

Mildew, which frequently appears on the leaves and stems especially in cold, damp weather, may be controlled by a spray of one ounce of sulphide of potassium, dissolved in eight ounces of soft soap and three gallons of water. Dusting with powdered sulphur is also effective.

Cut-flower roses, excepting perhaps the Hybrid Perpetuals, need winter protection in latitudes north of Philadelphia. This may be provided by a heavy mulching of coarse manure, straw or leaves; evergreen boughs are often helpful in holding the other material in place, besides being a protection in themselves. Individual plants may be wrapped in straw or straw and burlap. Banking of earth to a height of a foot or more may be recommended as a most effective prevention of injury from cold, especially if covered well with manure after the ground first freezes. Climbing roses are usually sufficiently hardy to stand a normal winter; but when planted in exposed locations it is safer to bend the tops down to the ground and cover them with soil and litter. Before covering, the tops may be cut back somewhat, so that the material may be more easily applied. Of course, this should be followed in the spring by the regular pruning.

Roses grown for cut-flowers should be severely pruned. The result will be not only better flowers, but prolonged life to the plant. Hybrid Perpetuals and Hybrid Teas should be pruned as early in the spring as weather will permit. Thin out the weak shoots and side growth and cut back the main wood to from four to eight "eyes," leaving about one-third of the previous year's growth. Weak-growing varieties can be cut nearly to the ground and they will produce excellent flowers in June. Dwarf or Bedding roses require only the dead and weaker branches to be removed, pruning the tips back lightly. Climbing roses should not be pruned severely. Cut out the coarse, heavy wood over two years old; the remaining wood should not be pruned back until after flowering, as the blooms come on last year's growth.

GARDEN ROSES

The Roses suitable for cut-flower purposes are grouped under this head. They include most of the hybrids best adapted to garden culture. Abbreviations: A. B., Austrian Brier; B., Bourbon; H. P., Hybrid Perpetual; H. T., Hybrid Tea; M., Moss; T., Tea.

POTTED PLANTS

Nearly all the plants we offer this season are from 5 and 6 inch pots and in a thrifty growing condition when delivered. Any varieties which can be supplied in a dormant state are listed under "Dormant Plants."

THE ROSE GARDEN

Aside from its architectural value, the rose garden has the practical advantage of allowing the roses to receive the particular sort of care which they require without involving other lands of perhaps dissimilar habits. The purpose of our Landscape Department is to supply information and advice in matters of this nature. Designs and estimates are furnished.

In this connection we would call attention to our facilities for supplying Arbors, Arches, Fences, and similar structures such as are frequently called for in garden developments. These are built in our own completely equipped shop, which operates exclusively on work of this character. Many of the smaller articles are carried in stock for immediate delivery, but special attention is devoted to high-class custom work.

PAEONIES

Paeonies should be planted in rich, deep moist soil, after which they will require less attention than any other class of flowering plants. They are perfectly hardy and their remarkable freedom from disease and insects makes them most desirable. Paeonies thrive in all locations whether in the broad sunlight or partial shade.

DAHLIAS

THESE old-fashioned flowers have always been in favor on account of their bright colors, and their freedom of bloom under unfavorable conditions. Late developments have added such beauty and gracefulness that they are more than worthy of the increasing interest in their cultivation which is now apparent.

Their extreme variation in form and color has resulted in an almost endless assortment of named Dahlias; but careful selection reduces to a comparatively small number the sorts that are of recognized value for garden cultivation, and it is of such sorts that our collection is comprised. Type of flower is indicated after name of each.

CULTURAL SUGGESTIONS

Strong roots may be planted about two weeks before danger from frost is over. In the vicinity of Boston that is usually between the middle of April and the first day of May. As the Dahlia is essentially a late-flowering plant, early planting is desirable in order to secure as large an amount of bloom as possible before the frosts of autumn.

Any good garden soil will give success, though it is essential that it be of such nature as to hold moisture through periods of drought. Deep and thorough tillage both before and after planting is an important factor. All fertilizing materials should be thoroughly incorporated with the soil and the ground thoroughly spaded up to a depth of ten inches. Deep tillage allows the roots to penetrate the soil to a good depth after food and moisture particularly during a drought, while during wet seasons it provides drainage. After the growth starts, the surface and soil should be kept cultivated; but when the flowering season commences, this cultivation must be carefully and lightly done so that not more than two or three inches of the surface soil is stirred. Dahlias require little or no watering except in times of severe and protracted drought. Whenever the plants are watered, the soil should soon afterwards be lightly but thoroughly stirred to a depth of two or three inches to prevent the surface caking.

The tubers should be lifted as soon as the tops have been blackened by frost, but not before. Shake off the adhering particles of soil and dry for a few hours in the sun, being careful that the temperature is well above freezing. The roots should be stored in a cellar, and conditions best suited for potatoes will be found to suit Dahlias. If the cellar is very dry or if there is danger from frost, they may be buried in dry sand, sawdust or tanbark. Frost, excessive heat or moisture are fatal to Dahlias in storage.

The clumps may be wintered undivided, but they should be divided before re-planting. Care must be taken to see that each root has at least one "eye" or it will not start. The eyes or buds are usually found well up on the stem, so that each root should be cut off with a part of the collar or stalk. If difficulty is experienced in finding the eyes, division of the clumps may be postponed until nearly time for planting, when a few days in a warm, moist place will start sufficient growth to show the eyes distinctly.

LEXINGTON-GROWN GLADIOLI

AMONG the annual and bulbous plants valuable for garden culture, the Gladiolus is becoming increasingly popular. It is useful for bordering and for massing, and blooms late in the season when bright flowers are becoming scarce; for cut-flower purposes it is unsurpassed. The simplicity of its cultural requirements is not its least important qualification. To those unfamiliar with the recent developments in Gladioli, the wonderful coloring and free, open blooms of the newer varieties will be a revelation.

We wish to renew our invitation to our friends to visit our grounds during the blooming season, in August and September, and enjoy the expanse and variety of bloom that only an immense planting makes possible. Upon request, we will send notice of the period of best bloom.

CULTURAL DIRECTIONS

Gladioli require much the same soil conditions as do potatoes, rich, yet porous, soils giving best results. Stable manure may be used for fertilizer; but commercial phosphate, sheep manure, or a mixture of ground bone and wood-ashes is good, the last-named being especially valuable.

Bulbs may be planted as early as the ground has dried out in spring, and plantings may continue at intervals until early July if succession of bloom is sought. Time of bloom varies from sixty-five to ninety days after planting. Set the bulbs right-side up, five or six inches deep and three to six inches apart, selecting a situation where sunlight and moisture will be plentiful. Frequent cultivation should be given during the growing season.

In the Fall, after the leaves turn brown, the bulbs should be lifted and the stalks cut off, after which they should be stored in a cool place where frost will not reach them. When they have dried, the adhering fibrous roots and shriveled "spent" corm should be torn off.

Bulbs at the single or dozen rate sent postpaid to any address.

FLOWERING CANNAS

OUR collection comprises many of Wintzer's greatest creations in giant orchid-flowered Cannas, all of which have won the highest awards at the world's most notable exhibitions. These new and improved forms of Cannas must be seen to be appreciated. Their brilliancy of color, perfect flower-spikes, and free blooming qualities combine to make them the most popular of flowering plants for lawn decoration. Our Canna fields, when in bloom, always attract much favorable comment.

Cannas thrive in any good garden soil, made rich with well-rotted stable dressing. Best results are obtained by starting the roots indoors during March or April, the plants being set out after the weather is settled and the ground warm, usually in May or June. When planting dormant roots, do not set too deep. The eye should show a little above the ground when done. Set them about 18 inches apart each way. Water sparingly the first two weeks after planting; when growing freely, water liberally. We do not furnish dormant roots after April 1st, but have a full stock of growing plants in pots ready for setting as soon as weather conditions are favorable. By setting these pot-grown plants, one secures a much longer flowering period than when dormant roots are planted. Cannas continue to bloom freely until the frost cuts them down in the late autumn, after which the roots should be lifted and stored in a dry place free from frost.
